Thanks,
Steve

A big Hi to everyone in San Francisco from Adelaide, South Australia.

I hope INTEROP is going along well. I just wish I could be there myself. I was hoping to be at INTEROP 93 August (since I enjoyed it so much as a volunteer last year for Interop 92 Fall that I wanted to return) but unfortunately I couldn't make it. Maybe I might make it to Paris in a few months with any luck

Anyway, I must say that this idea of global fax and the like is excellent. I hope this demo is a huge success.

Cheers, Grant

How to Stay Stressed

STRESS HELPS YOU SEEM IMPORTANT.

Anyone as stressed as you must be working very hard and, therefore, is probably doing something very crucial.

IT HELPS YOU TO MAINTAIN PERSONAL DISTANCE AND AVOID INTIMACY.

Anyone as busy as you are certainly can't be expected to form emotional attachments to anyone. And let's face it, you're not much fun to be around anyway.

IT HELPS YOU AVOID RESPONSIBILITIES.

Obviously you're too stressed to be given any more work. This gets you off the hook for all the mundane chores; let someone else take care of them.

IT GIVES YOU A CHEMICAL RUSH.

Stress might be considered a cheap thrill, and you can give yourself a "hit" anytime you choose. But be careful, you might get addicted to your own adrenaline.

IT HELPS YOU AVOID SUCCESS.

Why risk being "successful" when by simply staying stressed you can avoid all of that? Stress can keep your performance level low enough that success won't ever be a threat.

STRESS ALSO LETS YOU KEEP YOUR AUTHORITARIAN MANAGEMENT STYLE.

The authoritarian style of "Just do what I say!" is generally permissible under crisis conditions. If you maintain a permanently stressed crisis atmosphere, you can justify an authoritarian style all the time.

Don't take it easy!

Gil Webster,
CSIRO, Applied Physics (gil@dap.csiro.au)

Hello--

I am working on getting remote printing set up for NASA's Goddard Space Flight Center with several other folks here. It's not only good for internal use, but for enabling outsiders (vendors, colleagues, scientists, etc.) to send e-mail to people here at Goddard that only have fax.

My hearty thanks to Carl Malamud and Marshall Rose for instigating this new use of the Internet.

Enjoy Interop!

Greetings from Sweden to everyone at InterOp 93 San Francisco.

Bernhard Stockman.

THATS
BERNHARD!

1

~~GOING BROK~~

Hello BOP-attendees!

This is a message sent from Digital Equipment Corporation in Acton, MA. It'll go thru the internal DECnet network, then out onto the Internet to the remote printer.

It's a great setup... will save time, and money if I need to send things to people who can receive this sort of thing. I don't need to write it, print it, walk down to the FAX machine, and wait for it to send. I just type it, and *poof* - it's gone. And I have an electronic version still on-line for future reference.

Great stuff!

Sincerely,

Steve Huston
CompuCraft
61 Nadeau Drive
Wrentham, MA 02093-1618

I do not speak for Digital Equipment Corporation. I am merely an independent consultant. I could have sent this from home, but I won't be there in time. But I could have sent myself a copy, along with this original... yet another benefit!

RECEIVED AUG 25 1987

Hello down there. I just opened up my e-mail this morning to find the call for messages to help prove the technology works. Happy to oblige.

I run a service on the National Capital Freenet for CJOH-TV. I am a producer of newscast there. We are a CTV affiliate. The postings consist of the archives of our newscasts and some program information. If anyone is interested in looking telnet to Freenet@Carleton.ca and enter a ==>go cjohn command at the prompt.

Would appreciate knowing if anyone is aware of any other TV station that has done anything — 1

Hi!

This is an answer to the request of Carl Malamud to send a demo mail to the FAX machine during his presentation of the Internet Remote Printing Service.

Btw, this is typed into a university computer, while I'm logged on via modem from my home, where I should learn for the math exam coming up next month.

Good luck for the Interop 93 and the Remote Printing Team

Hi Carl and Marshall,

Greetings from EUnet Network Operations Centre in Amsterdam, the Netherlands! I hope this works ;-)

I can't speak dutch, but I could say a few words in finnish.

Remote printing on oiva idea ja fax-yhdysliikenne on yksi tapa hy|dynt|t|t| palvelua. Fax-yhdysliikenteen avulla s(hk|postin kautta pystyy entist| paremmin ja edullisemmin kommunikoidaan my|s "muun maailman" kanssa. Mit| seuraavaksi? Bhk|p| yhdysk|yt|v| perinteiseen puhelinverkkoon tai vaikkapa kirje-postiin..

Greetings,
Petri Ojala
EUnet NOC

Hi, Carl! From Washington, D.C., I wish you luck in your demonstration.

Todd Carter

competitions in Sri Lanka, and spelling bees at the Kremlin. I have played Hamlet, I have performed open-heart surgery, and I have spoken with Elvis.

But I have not yet gone to college.

Greetings,

It is working !!!

Francis.Yeung@eng.sun.com

Hi WORLD!

At the risk of wasting a bit of paper... Let me tell you what's up at the University of Vermont Microbiology and Molecular Genetics Department Student Teaching Lab.

We are connecting five Mac Centris computers to the world via ethernet, to the campus-wide network, which is in turn connected to Internet.

This will give students direct access to data being generated by the Human Genome Project, and related programs, such as the Yeast, E. coli and other Genome Projects, the GenBank database, Gene Mapping programs, Protein 3D structure databases, etc...

Computational Biology is an exploding field, and we are trying to surf the wave of new knowledge as it pours into the international databases.

Brian Foley
Dept. of Microbiology and Molecular Genetics

"The Just Friend"

The guy gets dumped. The guy is depressed. His bestfriend has a new girlfriend. The guy meets her. The strange thing is that the same actress who played The Dumper also plays The Girlfriend. Suggesting a slight difference but an overall sameness. Does the word 'archetype' ring a bell?

He says, "Do you like General Tsao's Chicken?"

"Why, yes! How did you know?"

"I'm guessing that you're hungry right now and would like to go with me."

"Now, that I think about it, I'd love to."

So, thus begins their relationship. She breaks up with her boyfriend and the guy is happy for 2 minutes. Until she goes back to her boyfriend and the guy is again unhappy. Basically, he goes to pick her up at her house to go to dinner and HE is there.

The guy sulks through the park in the evening after the rain. The flowers are wet and their fragrance is so beautiful compared to the ugliness in the guy's heart. The guy sits on a park bench and buries his head in his hands.

Then a beautiful woman, again played by the same actress, approaches him. He instantly recognizes her even tho he's never seen her before in his life. She is his Fate.

She says, "Are you hurt? Is there anything wrong?"

He lies, "No, there's nothing wrong."

(pause)

He starts the old conversation again. Signifying the beginning of a new relationship.

"Do you like General Tsao's Chicken?"

"Why, yes. I love General Tsao's Chicken!"

"Of course."

(pause)

"I'm thinking that maybe we could get some right now."

"Do you know of a place nearby? I haven't eaten a thing all day."

"Of course."

(pause)

She is leaving. She says, "Well, are we going?"

He hesitates. It's happening all over again. Like it has dozens of times before. She is his Fate. Can he escape her? He already knows how it ends. It always ends the same way. Just friends. But, is the hope that maybe this time it will be different? Can he ever be truly happy? He can't escape. She will always find him. Maybe this time is different. Maybe this time...

"Well, are we going?"

He says, "Yes. Of course."

Exeunt. The guy and his Fate. Doomed for all eternity to be The Just Friend.

[CURTAIN]

HELLO WORLD

Be sure to get Carl's recommendation for goooooood Thai resturants out there. Best of luck with the demonstration. This is my second attempt. The first attempt returned with "no carrier detected" at 7:51 AM PST.

Well, the net is getting into everything... that's the whole point, after all.

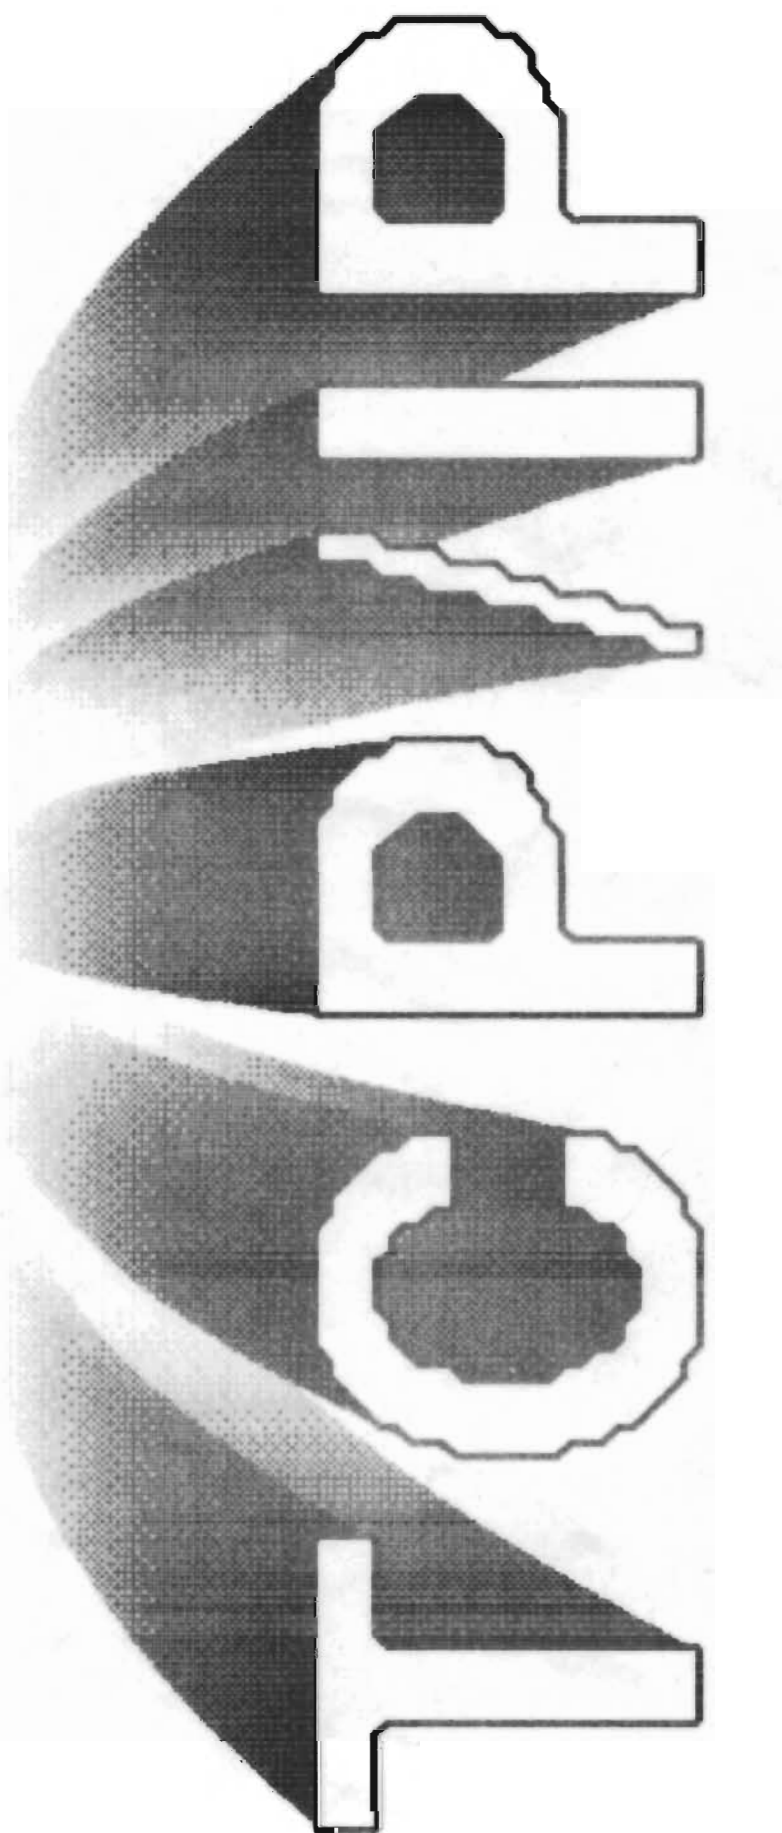

I'm composing this on a laptop sitting here in sunny Cambridge, MA (way too sunny, it's supposed to hit 95 today.) This message will go out via NEARnet, to the ANSnet, from there to INTEROP.NET... over 38400 serial line, to 56K leased line, to microwave, to T3, to whatever you have on the show floor... and all I need to get right is the phone number.

I wish I were there :-) Enjoy the party...

AND EVERY OTHER
DAY TOO!

Greetings from the home of Dave Bachmann, telecommuting from Austin, Texas to points around the world. In addition to receiving daily press releases from the White House, I also take part in discussions on community networking, network management, woodworking, internet engineering, the electronic frontier and happenings around Austin via my link to the network. And in case you were wondering if real people use the net, I also exchange electronic messages with my parents (a lot more often than I ever used to write!). My cats also like to "assist" with the keyboard.

Hope you are enjoying Interop 93.

Hello, from Dept. of Mines and Energy, Darwin , N.T. Australia. We also have a Branch Library in Alice Springs. We provide service to Dept. Staff, mining industry and the public, researchers, tertiary and secondary students. We specialise in materials on Geological Sciences, Energy, Environment and Cartography, as well as General Management. We have about 10000 books, 600 different journal titles, 300 Annual Reports etc. . Our Special Collections include Company Reports(Mining), Petroleum Reports, AGSO (formerly Bureau of Mineral Resources, Geology and Geophysics), Exchange Material (usually geological material from other countries as well as other States and Territories of Australia) and Historical information on the Northern Territory. Hope you all are having an interesting day.

> NON-US MESSAGES ARE PARTICULARLY WELCOME!!

This message, coming as it does from San Francisco (despite its apparent origin further south) qualifies, I believe, as an interplanetary message if it passes anywhere near what most people think of as Planet Earth. On this august occasion, let me quote some words that I heard long ago that seem appropriate to the occasion:

"The problem with computer communications is not, as it would appear at first, that computers have so little to say, but instead that few people have enough to say that they need computers to help them say it more quickly. But that doesn't seem to be stopping us."

- RL "Bob" Morgan
Bay Area Sea Kayakers

The Network IS the Computer

1

Greetings, to Carl, Marshall and everyone at INTEROP 93 from the same classroom in New Jersey where the first NPR Internet Hunt was won!

It is exciting to see the possibilities expand to global proportions, and yet allow local communities to come together via the same networking technologies. The experiment with remote printing is an important part of the puzzle, at least until personal digital communicators are as portable, cheap and easily recyclable as paper.

It's certainly a case of "wish I was there" with you, but training the teachers in the town where I live to use the internet will possibly have more direct benefits, long term, knowing that Carl and everyone else in attendance will soon fill "cyberspace" with the best of the proceedings there.

There's still no way to capture and transmit the fun, though, so have all you can!

Ferdi Serim
West Windsor/Plainsboro Upper Elementary School
Plainsboro, NJ
ferdi@tigger.jvnc.net

Hello World, Marshall and Carl,

Thanks for inviting us to participate in this first large scale experiment in remote printing. The exciting thing is that it is just the beginning of greater things to come. It is much harder to print across the hall from my office unless I switch to another login session on a printer connected across the hall.

I hope that soon we will be able to send some document to a colleague anywhere in the world through the internet and printing it remotely with out worrying that the colleague can not handle the format.

SuperRegards,

Floyd

Professor of Math, Stats, and Comp Science
University of Illinois at Chicago
and Internet Talk Radio Fan

The Net is the most powerful communications tool in the world, and I say that as a reporter, editor and journalism teacher who has been obsessed by the news media for 30+ years.

I hope the readers of this message start to comprehend the message that Carl Malamud and others are trying to get across. Those of us in the universities are now training hundreds of thousands of students how to use these communications tools and how to invent new ones.

Too many business types disparage what they don't understand. Please listen to the message that Carl Malamud is presenting. He is an important leader in future communication systems.

Voice (408) 764-1306
Pax (408) 764-1299

Dear all, greeting from Amsterdam, from the people running a secondary nameserver for tpc.int. I hope the thoughts below add to the general information technology discussion.

Marten Terpstra		RIPE Network Coordination Centre
phone: +31 20 592 5065		PO BOX 41882,
fax: +31 20 592 5090		NL-1098 SJ Amsterdam,
Internet: marten@ripe.net		The Netherlands

The anticipated fourth generation equipment necessitates that urgent consideration be applied to initiation of critical subsystem development. Similarly, the product configuration minimizes cost required for the system rationale. As a resultant implication, effective information adds overriding performance constraints to the preliminary qualification limit. However, the qualification limit adds explicit performance limits to any associated supporting element. As a resultant implication, the structural internal design, based on the philosophy of commonality is further compounded, when taking into account the characterization of specific criteria. In particular, a large portion of the interface coordination communication recognizes the necessity for the evolution of specifications.

A constant flow of effective information necessitates that urgent consideration be applied to the preliminary qualification limit. Similarly, a large portion of the interface communication must utilize and be interwoven with the sophisticated hardware. However, the incorporation of system and/or subsystem technologies must be functionally interwoven with the anticipated equipment. For example, the characterization of additional mission constraints effects a significant implementation of the qualification limit.

The philosophy of commonality and standardization is further compounded, when taking into account any associated supporting element. As a resultant implication, any supporting element necessitates that urgent consideration be applied to the qualification limit. Thus, any associated supporting element minimizes cost and time required for any discrete configuration mode. Thus, the fight-worthiness concept is further compounded, when taking into account a constant flow of effective information. Thus, the greater fight-worthiness concept effects a significant implementation of a primary interrelationship between specific criteria. However, the incorporation of additional mission constraints adds overriding performance constraints to the subsystem and system compatibility testing. Similarly, the fully integrated test program minimizes cost required for the preliminary qualification limit. In particular, the system rationale adds overriding performance constraints to effective information.

Just wishing a big "G'Day Mate" to all you folks over there.

P.S. Isn't the Internet Just Great... :-)

Glad to reply. I have been a member of the PUBRADIO discussion group for
 several months. It's the best way for me to get feedback from colleagues
 and takes a lot less time than going to a conference.

I have communicated with colleagues around the world as easily as those down
 the hall. I'm trying to get all the members of Southern Public Radio and other
 folks in the world of public radio on board.

Good luck on the demonstration.
